

## Agtron S-SERIES II

### The S-Series II Agtron Process Analyser

The new S-SERIES II is the result of Agtron's 50 years of experience supplying analytical equipment to the food industry. It is an all solid-state replacement for the previous Agtron M-45 general application analyzer.

### Applications

The AGTRON S-SERIES II is a small area (2sq.in.) reflectance spectrophotometer designed to deal with the challenge of measuring color homogeneous liquids, pastes, powders, creams, small particulates and samples of uniform geometry.

### Operation

Simple calibration, non-critical sample preparation, easy to understand single number scores, and robust construction make the S-SERIES II the ideal choice for both product development and production quality control.

### Calibration

The S-SERIES is calibrated using reference reflectance disks.

### Ease of use

Process assessment is made quickly and easily without the necessity of highly technical operations, mathematical or graphic correlations, special colour reference standards, or complex sample preparation.
